- + Sizes from 3'x4' up to 4'x16' print area
- + Custom sizes available

TMI Jaguar clamshell one-arm screenprinters incorporate many of the features found on our more expensive parallel lift models, including micro adjustable aluminum vacuum top, side clamp system, and off-contact adjustment. All presses come complete with vacuum turbine, universal squeegee holder, stainless steel shaft and bearing unit. The classic one-arm clamshell remains the most economical way for shops to make the jump into large format printing and large format profits.

Heavy duty welded steel frames and components ensure long production life from these presses - they were built to withstand years of abuse from hard working printers, while continuing to make money and produce nice work. Perfect for election signs, traffic signs, displays, banners. Easy height adjustment allows for printing plastic, metal, wood, card, or other thick materials.

Quick set-up, ease of operation, and the best prices in North America on this type and size of press make a Jaguar clamshell one-arm a smart production solution. Custom sizes and configurations for glass or metal printing available.
